

Case Assignment: Early Completion Risk & Outcome Integrity

Role:	Sr. Associate, Impact Measurement - Philippines
Submission Timeline:	2 days (48 hours)

Context

As part of Wadhvani Foundation's global Skilling initiative, UDFI in the Philippines supports institutions to train youth for employment. Students learn through structured modules, and progress is measured through completion of assessments tied to each module. As part of the larger Skilling impact measurement, we observed an unusual pattern:

A large proportion of students in some cohorts are completing the course much faster than the expected learning duration.

This raises a key concern: Are students genuinely learning, or simply rushing through for completion?

Your task is to design an Early Warning System (EWS) to detect abnormal completion patterns and recommend program actions.

Phase 1 - Design an Early Completion Warning System (EWS)

Build a system that flags partners/cohorts likely completing too "fast" to support real learning.

A. Methodology & Logic

- How will you detect "early completion" risk?
- What is the expected pacing model you will use?
- What thresholds qualify as warning?

(You are free to choose the model; however, justify your approach.)

B. Dashboard / Model File

Using the accompanying data provided, create a prototype that shows the output of the EWS.

C. EWS Policy

A 1-2 page note outlining the SOP:

- What are the alert categories or rules used?
- How often should the EWS run?
- Who should receive the alerts?
- Recommended intervention actions

Phase 2 - Outcome Linkage

1. Should fast completers be counted as graduates? Why/why not?
2. How would you ensure completion reflects genuine readiness and learning?
3. How would you design a scalable approach to verify employment outcomes?
4. What governance controls would you implement to avoid inflated reporting?
5. What risks arise if these are not addressed - and how would you mitigate them?

Deliverables

- EWS prototype

UDFI, Philippines**Impact Measurement**

- 1/2-page logic explanation
- 1/2-page SOP
- Outcome Linkage Notes
- 4/5-slide presentation to Senior Leadership on the issue & solution approach

Guidance

We value clarity, practicality, and system-building. State assumptions clearly. Avoid over-engineering.
